

# **Being at Home**

### A Therapies Toolkit

Provided by: Occupational Therapy, Speech and Language Therapy & Physiotherapy Teams

Toolkit created by Redbridge OT, SLT and Physio Teams

## Introduction

- This home pack was designed to support parents and caregivers of children with disabilities while families are at home.
- Continue to follow any recommendations from therapists or therapy/activities programmes you already have for your child.
- This pack is designed to be helpful for a wide range of families so not all information may be relevant to your child.

# Contents

**Home Routines** 

**Keeping Healthy** 

Play

**Useful Links and Info** 

**Contact Information** 

**Resources** 

# Top things to remember

- Create a routine
- Involve your child in your day to day activities
- Take into account your child's way of communicating

## **Create a routine**

#### Knowing what is going to happen in the day can help reduce a child's anxiety

- <u>Keep a predictable schedule each day</u>, e.g. have meals at the same time, wake up at the same time.
- Show the child what is happening throughout the day (e.g. <u>Objects of</u> <u>Reference/Visual timetable/ First/Then</u> <u>board).</u>
- See examples of what can be included in a visual timetable. Also see "Resources" section for print/use at home visual timetable

#### Visual time table

#### Objects of reference

## **Bath time**

Bath time can take place at <u>any time of the day</u> - a fun opportunity for learning and playing together !
(However, bear in mind the importance of routine)

<u> </u>
bath

Never leave your child unsupervised in the bath.

- **Toys** cups, colanders, jugs, boats, sponges, brushes, spoons, balls, etc.
- Play with **Bubbles**
- Use bath toys to make up story
- Singing songs
- Offer choices e.g. ball or duck?
- Encourage your child to **request** 'more', or 'finished'.
- If the child uses spoken words, **add one or two words** to their words/sentences
- Use <u>key words</u> to comment on what you are doing e.g. washing, drying, pouring, etc.
- Use this time to do some **stretches** or gentle **movements** of your child's arms and legs.
- Doing this in the warm water will help muscles relax and make movements easier

## **Getting Dressed**

If your child does not speak, look for other signs of communication, e.g. reaching, looking or vocalizing!

- Use <u>key words</u> e.g. items of clothing, body parts and direction of movement
- **Comment** on what you are doing e.g. 'let's put on your blue shirt', 'lift your arms'
- Offer choices e.g. between two shirts – do you want the red one, or the blue one?'

- Use the opportunity for following instructions e.g.
   'first put on your shirt, then put on your jumper'
- Use the time to do your child's stretches, they will make getting dressed easier!
- Sing songs while doing this e.g. "put your arms in the air like you just don't care" to make it fun!

## **Meal Times**

## ....a great time to experience different foods and a variety of textures through play

- Ensure your child is always well positioned for safe eating
- Offer **choices** e.g. 'food vs drink', 'orange juice vs milk'.
- Sabotage meal times to <u>create</u> <u>opportunities</u> for your child to communicate e.g. do not give utensils to encourage child to request for it, 'I want ....'
- **Describe** the food e.g. 'the pasta is *hot*'
- Support your child to express their **preferences** by modelling vocabulary e.g. 'Johnny likes pizza' and 'Tobi does not like pasta'

- Talk to your child about what you are doing together e.g. 'stirring', 'pouring' and 'eating'.
- Give your child time to develop their self feeding/ independence skills

# Top things to remember

- Keep using any orthotics (splints, lycra suits, leg gaiters etc.) that your child already has.
- Change position regularly
- Keep an eye out for pressure areas

# **Changing position**

It is <u>very</u> important for your child to change position throughout the day. It is recommend that your child changes position every <u>2 hours.</u>

- A change in position will look different for every child.
- Some options for changes of position can include;
  - Standing
  - Lying on your back
  - Sitting

- Lying on your tummy
- Lying on your side

 Use opportunities in your daily routine to complete this, for example: After personal care spend some time in lying. Complete activities at the table when standing.

## **Pressure Areas**

- Pressure ulcers can affect any part of the body that's put under pressure. They're most common on bony parts of the body, such as the heels, elbows, hips and base of the spine.
- It is very important that you check your child's skin regularly for any signs of pressure areas developing.

#### Early signs:

- Part of the skin being discoloured and not returning to typical skin colour when pressure is removed.
- A patch of skin that feels warm, spongy or hard

#### If you notice these signs;

- Make sure the affected areas do not have pressure going through them.
- For example:
  - Floating heels
  - Changing position regularly

If these areas develop into open wounds or blisters, your child begins to feel unwell, has a fever or there is pus coming from the wound you must <u>seek urgent</u> <u>medical advice</u>

## Top tips for different positions

All children are different, during their changes of position you should aim for the best posture for **your child.** Below are some general tips to apply.

#### SITTING

-Hips and knees should be at 90 degrees (right angles) as much as possible.
-Bottom back in chair.
-No twisting or turning or leaning heavily to one side

#### STANDING

- -No twisting/turning.
- -Hips knees feet should be in line.
- -Remember to check the straps on the standing frame are tight,

#### LYING

- Try to position as straight as possible, no twisting/turning.
- Support under knees with a pillow and make sure not too much pressure is going through heels.

## Movement

#### All movement is good for you!

Movement looks different for all children but in most cases **any kind of movement is beneficial**. Whether you are helping your child move or they are doing it on their own there are lots of benefits!

No matter how your child moves all movement is goodencourage them to step, walk or run throughout the day.

**Balloon** tennis

doorways and

encourage

Tying balloons to

reaching/hitting

- yoga
- The entire family can join in with yoga!
- Some children might need help completing the movements.
  - Blowing bubbles offers great motivation for movement, communication and interaction.

## **Being outside**

#### Try to go outside to experience the weather and get fresh air once a day (more if you have a garden!).

Being outside you can enjoy the fresh air and a change of environment with new sites, smells and textures.

Balls can be used for all kinds of activities;

- Rolling
- Push the ball
- Throw the ball
- Holding with two hands
- Passing to family members

Try creating an obstacle coursethis can be done inside or outside and can use lots of things you already have at home

# Top things to remember

- Remember to have fun! Games, singing, dancing and playing are all great ways to interact with your child and remember times flies when you're having fun!
- Different activities motivate different children – find what works for you!

# Play

#### Remember .... laughter is the best medicine!

#### Some ways to play.....

- Read a story using props eg toy cars, animal teddies can help your child to engage and interact
- Put on some favourite music and "dance" in what ever way you are able to, help your child to move their arms/legs/wheelchairs to the music.
- Enjoy some **messy play** *examples can be found in the "Useful links" page*
- Create a "sensory box" see "Resources" section for ideas
- "What's in the bag" activity hide toys in a bag and engage in fun, anticipatory and exciting play.
- Use your imagination set up a shop, stage a musical concert, pretend to be a hairdresser, dress up or put on a funny hat!
- Make something there are lots of craft ideas see the "Useful links" page for inspiration

## **Strategies**

## Find a special time to play - it could be for five minutes or it could be for an hour – do what works for you.

- Follow your child's lead respond to verbal or non-verbal language such as vocalisations/body movements/ facial expressions
- Add and extend language produced by your child, e.g. If your child says "car" expand and label the word by saying "yes, car, blue car ".
- Balance questions and comments try and comment on what your child is doing rather than asking questions. E.g. instead of saying "are you eating the banana?" You could say "eating the banana" (with an eating noise!) etc.
- Repeat games/activities over and over again
- Accompany verbal language with **Key Word Signs** when possible.

## 1. Visual Timetable

 You can use the below examples of activities/events that could go into a visual timetable to support your child throughout their day.

# Keeping active and interested

- Ensure your child has a range of activities both seated and moving to keep them busy and interested.
- Combine some of these activities:
- Start the day with a shower, and crunchy cereal
- Encourage jogging, walking and stretching and regular movement breaks (e.g. errands such as stacking chairs, wiping the board)
- Drink plenty of cold water
- Sucking a sweet or chewing gum
- Gardening or sports activities
- Spraying water mist on their face or place a cold flannel on the forehead or back of the neck
- Have the radio on, or upbeat music
- Use strong odours such as peppermint and perfume
- Artificial light
- Increased movement in the room

# **Calming activities**

- Slow rocking (this can be with a blanket wrapped around them)
- Hand massage
- The child can press down on their own head with clasped hands or sit on their hands
- Give chewy snacks which are calming (liquorice, fruit chews)
- Allow movement such as going for a walk
- Provide a fidget
- Weighted clothing and heavy coats
- Use natural dim lights and avoid fluorescent light
- Create chill out areas in the room
- Play quiet calming music in the background
- Use soothing smells, be aware of perfumes and other strong odours
- Avoid junk foods, sugars, and artificial colourings
- Sometimes ear defenders or sun glasses help to reduce the sensory input when it is overloading the child, like at the supermarket

## Creating a sensory exploration box

- Create a "sensory exploration box" filled with all sorts of things that are great to FEEL or LOOK at or SMELL. Set aside some time for your child to explore different things – you can make this easier by keeping them all in a box together.
- This could include: rough pinecones, soft fabric, bumpy Lego, crinkly paper, smooth plastic cup, squishy sponges, sparkling tinsel, hard shells, cold metal spoon, prickly hairbrush..... there are so many every day things that you could include have fun choosing what to put in it!
